The Twelve Days war by Numbers

The spokesperson for the Israeli army revealed the numerical data behind the military operation against Iran:

Attacks

1,500 Air Force sorties and 600 aerial refuelings.

1,400 attacks carried out by fighter jets and 500 drone strikes.

The furthest attack: in Mashhad, at a distance of 2,400 km, carried out by a fighter jet.

Strategic Eliminations

11 high-ranking nuclear scientists were eliminated.

More than 30 senior officials of Iran’s defense system were eliminated.

Hundreds of soldiers from the Iranian military forces were eliminated.

Nuclear Program

3 nuclear sites were attacked: Isfahan, Natanz, and Fordow.

Thousands of centrifuges (intended for uranium enrichment) were destroyed.

Nuclear research and development centers were destroyed.

Military Infrastructure and Weaponry

15 enemy aircraft were destroyed.

80 surface-to-air launchers (air defense systems) were

destroyed.

200 ballistic missile launchers were destroyed (50% of all Iranian launchers).

35 missile production factories were attacked.

6 airports were attacked.

Interceptions and Defense

86% success in intercepting ballistic missiles (Iran fired hundreds of missiles, which could potentially have killed thousands of Israelis).

99% success in intercepting drones (Iran launched approximately one thousand).
